scraperapi

ScraperAPI Cheatsheet

Web Scraping Made Simple & Reliable

Bypass Blocks • Handle Proxies • Extract Data • Scale Effortlessly

Why ScraperAPI?

Bypass Blocking	Rotating Proxies	CAPTCHA Solving	Headless Browsers	Structured APIs	99.9% Uptime

1 Get Your API Key

Sign up at scraperapi.com and get your API key from the dashboard.

```
API_KEY = 'YOUR_SCRAPERAPI_KEY'
```

2 Basic Request (Universal Endpoint)

Use the universal ScraperAPI endpoint to scrape any webpage.

```
curl "https://api.scraperapi.com?api_key=API_KEY&url=TARGET_URL"
```

Your API Key — Target Website URL

Example:

```
curl "https://api.scraperapi.com?api_key=API_KEY&url=https://example.com"
```

3 Supported Parameters

Parameter	Description	Example
api_key	Your ScraperAPI key	YOUR_API_KEY
url	Target website URL	https://example.com
country_code	Geolocation (un, us, gb, etc.)	us
render	Render JavaScript (true/false)	true
premium	Use premium proxies (true/false)	true
session	Keep the same IP for session	my_session_123
js	Custom JavaScript to execute	document.title
wait	Wait time in ms	

4 Example with Parameters

```
curl "https://api.scraperapi.com?api_key=API_KEY&url=https://example.com\
      &country_code=us&render=true&premium=true&wait=2000"
```

Use Cases

- Price Monitoring
- Lead Generation
- SERP Scraping
- E-commerce Data
- Social Media Data
- Market Research

5 How It Works

Your Request → ScraperAPI Network → Target Website → Response

- Your Request: Send request with API key & target URL
- ScraperAPI Network: Rotating proxies, CAPTCHA solving, headless browsers
- Target Website: Bypass blocks and fetch data
- Response: Clean HTML / JSON returned to you

6 Amazon Search API (Structured Data)

Get structured data from Amazon SERP with a simple API call.

```
curl "https://api.scraperapi.com?structured/amazon/search?api_key=API_KEY&
query=non-fiction%20books%20for%20learning%20programming&country=us"
```

```
{
  "search_metadata": { "query": "non-fiction books for learning programming", ... },
  "search_results": [
    {
      "position": 1,
      "title": "Clean Code: A Handbook of Agile Software Craftsmanship",
      "price": "$33.99",
      "rating": 4.8,
      "url": "https://www.amazon.com/...",
      "image": "https://m.media-amazon.com/..."
    }
] }
```

7 Python Example

```
import requests, os, json
API_KEY = os.getenv("SCRAPER_API_KEY")

payload = {
    'api_key': API_KEY,
    'query': 'non-fiction books for learning programming',
    'country': 'us'
}
response = requests.get(
    'https://api.scraperapi.com/structured/amazon/search', params=payload)
products = response.json()

with open('amazon-products.json', 'w') as f:
    json.dump(products, f, indent=2)
print(f"Found {len(products['search_results'])} results")
```

8 Advanced Features

CAPTCHA Solving	Automatically solves reCAPTCHA, hCaptcha, and more.
Headless Browsing	Render JavaScript, AJAX, SPAs, and dynamic pages.
Geo-targeting	Access location-specific content with country_code.
Rotating Proxies	Millions of IPs to avoid rate limits and bans.
Session Control	Maintain sessions & cookies with session parameter.
Premium Proxies	High-quality residential IPs for tough targets.
Browser Choice	Choose browsers & versions (Chrome, Firefox, etc.).

9 Response Formats

HTML (Default)

```
<html>
  <head>...</head>
  <body>...</body>
</html>
```

JSON (Structured APIs)

```
{
  "search_results": [
    {...}, {...}
  ]
}
```

Raw / Text

```
Some raw text
content
...
```

10 Best Practices

- Always use premium proxies for difficult targets.
- Use **render=true** for JavaScript-heavy websites.
- Respect target websites' robots.txt and terms of service.
- Use sessions for multi-step workflows.
- Cache results and avoid unnecessary requests.

11 Quick Tips

- Use the Structured APIs for instant, ready-to-use data.
- Set **wait time** for slower pages.
- Monitor your usage in the dashboard.
- Combine with your favorite parsing tools (BeautifulSoup, lxml, etc.).

Popular Integration

Python requests · Node.js axios · PHP curl · JS fetch · Go http.Client

Sample Workflow

Define Query → Call API → Parse Data → Store / Analyze → Build Insights
